

Pro Series Test Jigs

Patented black "E" shaped test jigs made of sturdy ABS plastic and features an open air design with a center loading bar. Allows you to view the mechanical operations of a VCR and aids in diagnosing the problems. Loads smoothly into most VCRs.

VHS "G" Function Test Jig

Works perfectly for both traditional VHS and new "G" Chassis VCRs. The easy load open E design eliminates the frustrating jostling and jamming problems of earlier test jigs. This allows the technician maximum visibility and greater accessibility for more productive VCR servicing.

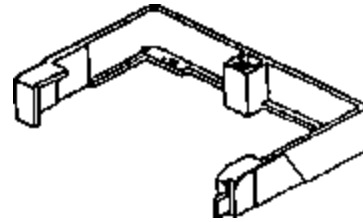

P/N: V-528

8mm Test Jig with Tape Detect Function

Operates all 8mm camcorders and VCRs. As safe as loading a standard 8mm video tape. Allows for maximum visibility and accessibility to perform 8mm service.

P/N: V-526

VCR Vu-Thru

BETA I-II-III Vu-Thru

Fits front load and top load VCRs and camcorders.

P/N: V-513

Miscellaneous Test Equipment

Lil' Bitty Tester™

Whether you're in the air, on land or sea, if you work on equipment that uses Triacs, SCRs or Fets, this versatile go/no-go tester is a must. Unit quickly determines the condition of device under test (in or out of circuit), giving you both an audio and visual indication as to the component status. Unit also tests transistors, diodes, LEDs, bipolar LEDs, fuses, lamps, bridge rectifiers and DC voltages. Comes complete with detailed instructions.

P/N: LB2

IC Clips

These injector-type prods firmly clip on to large or small components for testing purposes. Can be clipped on for meter reading for any required length of time while hands are free for other work. The 2 1/4" long clips are sold two per package - one red and one black.

P/N: IC2

IC Test Lead Set

Five color-coded, 16" test leads with miniature hook-on prods at both ends. A must for technicians and experimentors who want temporary interconnects without danger of shorting. Colors: Red, black, yellow, green and white.

P/N: IC500
